Once you connect that device, you can use Baidu WiFi Hotspot to create your own wireless network in a flash. He really only has the remarkable feature, so he is going to convert his desk into a momem. You can create a blacklist, and each device included in the list will never be able to reappear the network. The application also defends the safety of your computer, as it does not compromise your hard drive or data. Apart from a very thin range of scenarios, it is likely that you would not need this. The Wi-Fi network can be closed or restarted at any time, with a single click. It works as a great application that works only with the WiFi connection. Although you need it, it is a reliable small program that has a decent range. Baidu WiFi Hotspot is very useful and intuitive and allows users to continue working with a simple download. If this happens, even though, you still have cable connection to your desktop, you can use Baidu WiFi Hotspot to really transform your desktop connection on móvil WiFi to grant connection for surrounding devices. Based on the user interface, features and complexity, it has classified Baidu WiFi Hotspot's classification 5 of 5 stars, naming it essential, also allows users to do with only a few clicks. The application application Show all devices that connect to your network. Often, it doesn't even open. You could not connect to your domestic computer if you are outside the coffee or something, but whenever you are in the range of your PC, you must act as a modem and allow a signal to the wifi. Baidu WiFi Hotspot characteristics This is a program that is very limited in the characteristics. The problem here is whether I would need it or not. Baidu WiFi Hotspot Awards Baidu WiFi Hotspot editor has been reviewed by Frederick Barton on May 18, 2015. Add its decent speed and will have a new domestic network. With this simple and easy -to -use application, you can turn any cable connection into an unhairly network. This application is very simple and allows different devices to connect to your access point, which means one of one. I would recommend this application for users of all origins and with all the different levels of skill, since it is very simple in general and allows users to perform many things. You can connect your portable computers and maximum devices to the Wi-Fi connection of the computer. Once installed, the application will begin automatically and will begin an unharmed network immediately, without requesting any user input. However, it has some drostage limitations, and it is only good in a picnic of practical situations, but it is a free -sirmed free program that in case it is in a pinch and needs to convert your desktop into a point of access. It is extremely effective and allows users to work with numerous devices at the same time so that users can share WiFi easily from their own device and have no limitations with respect to how much they can share. The connected devices are listed and classified as a sliding menad, in the Right of the interface. Perhaps, if you have guests about who can not be on line, or if you want to use a mobile device, but the connection of the carrier is out. By one, it allows you to allow you a password to its access point. It is best to obtain a wireless network adapter, which is seen exactly as a USB flash unit. And while it has some limitations, it has no apparent errors that will dissuade it to use it. All controls are simple and simple, so you can configure your personal access point with a single click, even if you have no network experience. The application shows all devices currently connected to the access point. Baidu WiFi Hotspot works as a program that serves as an access point program that allows users to create their own access points of their networks easily. The hardware requirements are modest and there is no need to install any prior requirements tool. It is completely free, and when trying this application, you have nothing to lose. Moreover, it is optimized to work on old computers, so they will work even in the oldest system. However, while Baidu WiFi Hotspot shines with its free price and simplicity, it is limited in its usefulness. For you to create an access point, you must be connected by wire cable to the modem. PROS: You can configure your own wireless network in just a few seconds. In addition, it also allows you to block any device when you access your internet. Once the access point has been created, you can connect your devices. Developers have implemented several security characteristics in application. This is really the characteristic the only one that is worth talking. In addition, the software provides support for ICIC and NAT modes and allows you to change from one immediately, in the general configuration menad. If you do not have a lord to the Wi-Fi around you or if you do not want to fill your house with cables by installing a router, Baidu WiFi Hotspot will make your work much more easier. Information shown in the user interface, it is the amount of data used by the devices connected to your network. All files transferred are organized efficiently in a specific, specific destination. You can modify from the application setting menu. Safety and safe security terms, users will be happy to know that Baidu WiFi Hotspot is a perfectly secure application. It is simple and easy to use. Another feature that has is the ability to transfer files through devices connected to WiFi, but it is a very slow process and something that can be done half a dozen other forms, in addition to attacking your desktop computer for do it. You can send files from your computer to your mobile phone, or vice versa. It has a clean and simple interface. Application can not extend a mobile connection, limiting its usefulness. It only takes a few seconds to have it on any modern PC. The network will be named after your computer, but you can change it if you wish. Essentially works to allow you to perform your wireless network from your own computer or portable device. It also works much better than mobile hotspot applications, which only allow you to have a connection for a single device to connect. It allows users to work with it with only a few taps and also allows users to create their own traditional mobile access point for other mobile devices. It has functions, as greater Internet connectivity compared to alternative programs. This is ideal for other people to connect if they need it. Baidu WiFi Hotspot is offered as a freeware application. What is the WiFi access point of Baidu and what does Baidu WiFi Hotspot do the basic wins is that it will take your desktop with cable and transform it into a momem that gives you a signal to enabled devices for WiFi in the area?
